C. Summary of Assessment Process

We evaluated student work from selected courses in the Geology MS Program 2014-2015 to assess how well Program Student Learning Outcomes were met. The assessments presented here were derived from homework, written assignments, and oral presentations. A homework assignment from GEOL 6040 was evaluated using the department's Lab Project rubric to assess

at the mastery level in all areas. None displayed an exemplary level in more than one area of quantitative literacy. A thorough mastery of advanced algebra and graphing is an expected prerequisite for the course, but some students lack the basic preparation and others have the necessary preparation but their quantitative skills are quite rusty. Possible ways to improve learning outcomes for this assignment are: 1) a pre-assignment that gives students practice with advanced algebra skills, 2) recommendations for math tutoring at SCAA for students who do not perform well on a math skills pre-test given on the first day of class, 3) an additional, optional, session where students work on problems with the instructor present. In the future, similar assessment material will be assigned since calculating the age of geologic materials using isotopic data is a key student learning outcome for this course.

GEOL6340 Tectonic Geomorphology - Spring 2015: Written Communication

Final Précis of a Journal ArticleThis class focused on text readings and lectures initially and
